

Our creator has endowed every person and our constitution guarantees the right to illegal search and seizure. This proposed internet wiretap legislation would open every individuals private life to search and seizure with no possible guarantee of due process o law. This is the equivalent of installing a 'government door' in every home. A door openable at any time, by any 'authorized' person without notice. consent, or notification. We shall not sacrifice the precious gift of liberty for an illusion of security. 'Trust us, we trust no one - We have a right to listen to everything and an obligation to reveal to no one" security is not security. History tells us that this is the very enemy of liberty and freedom it claims to protect. A secure people is free people, free to gather, to converse, to dialog, and to organize apart from their government's watchful eye or ear.
